Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Solvent-resistant gloves made of nitrile rubber, neoprene, Viton wear.

· Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

· Penetration time of glove material

The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

• Eye protection: Tightly sealed goggles

· Body protection: Work clothing with long sleeves.
